RINZAI TERRADO

PYTHON DEVELOPER - DATA SCIENCE

Las Piñas City, Philippines | 0922 282 5663 | terradorinzai@gmail.com

PROFILE

Python developer and data science professional with experience building internal applications, APIs, machine learning workflows, ETL processes, and business automation. Hands-on exposure to LLM-based applications, RAG, MCP, NLP, and AI agent workflows through personal projects. Comfortable integrating data sources, developing backend services, and deploying data-driven solutions for operational and marketing use cases.

PROFESSIONAL EXPERIENCE

Okada Manila - Python Developer, Data Science **Sept 2024 - Present**

- Build and maintain Python-based internal applications that support marketing, analytics, and business operations.
- Develop APIs and backend services used by internal teams and automated workflows.
- Deploy machine learning models for analyst and business use, turning model outputs into reusable operational tools.
- Automate promotional offer workflows, including award loading and SMS-related processes through API integrations.
- Integrate SQL-based data sources and operational systems into reporting, analytics, and internal applications.
- Write unit tests for Python applications, APIs, and automation workflows to validate business logic and reduce regressions before deployment.
- Design database schemas and SQL data structures that support internal applications, reporting, and operational business processes.
- Develop event-driven Python workflows for automated processes and system integrations.
- Develop and maintain ETL and automated reporting processes; clean, validate, and transform data for downstream use.
- Perform QA and data validation for online game deployments, investigating configuration and calculation discrepancies.
- Work with Linux and Cloudera-based data environments supporting ETL and data-processing workloads.

EDUCATION

BS Computer Science, Specialization in Software Technology **2019 - 2024**
De La Salle University, Manila

SKILLS

- Python, SQL, REST APIs, , HTML, CSS, JavaScript
- Machine Learning, LLM Applications, Prompt Engineering, RAG, NLP, AI Agents, MCP
- ETL, Data Cleaning, Data Validation, Cloudera, Linux, BigQuery, Jupyter Notebook, Looker Studio, Statistics
- Git, API Integration, Web Development, Automation, Debugging, Business Intelligence
- Analytical Problem Solving, Critical Thinking
- Cross-Functional Collaboration, Teamwork Cooperation
- Technical Communication, Stakeholder Management, Attention to Detail
- Adapdability, Accountability, Time Management, Requirements Analysis

PROJECTS

- **ForgeRouter - AI Router:** Built a routing prototype focused on reducing unnecessary LLM token usage; observed roughly 50% lower token consumption on tested tasks.
- **StudyBuddy - AI Study Companion:** Prototype that uses AI to generate personalized study plans, quizzes, short lessons, and presentation content.
- **MiLady - Personal AI Agent:** Prototype personal AI agent built using the Hermes Agent ecosystem, exploring tool-enabled agent workflows.
- **ViralCut - AI Clipping Tool:** Prototype that uses AI to identify candidate clips from YouTube video content.
